Engineering culture.

Culture.

 Wikipedia definition

*Culture is defined as “**what is common to a group of people**” and “**what brings it together**”, what is **learned, passed on, produced and created**.*

Engineering.

 Wikipedia definition

*Engineering is the use of scientific principles to **design**,
build and **control** structures, machines and other
technical or industrial installations.*

Engineering culture.

My definition

*The principles upon which an organization or a team **aligns its vision** and its **decisions** regarding its engineering practices—both **human** and **technical**.*

Organic and implicit.

~~Abstract values.~~

Concrete principles.

Principles

- 📍 The importance of milestones.
- 🍳 The importance of the recipe.
- 🌐 The importance of autonomy.
- 👊 The importance of ownership.
- 🔬 The importance of consistency.
- 🌱 The importance of patience.
- 🚂 The importance of communities.
- 🍪 The importance of the *craft*.

The importance of milestones.

Writing code → *Shipping* code

The importance of the recipe.

Perfecting our way of doing things

The importance of autonomy.

Rules vs. *guidelines*

The importance of ownership.

Individual ownership + team ownership

The importance of consistency.

Clever code vs. maintainable code.

The importance of patience.

Encouraging the act of *not* writing code

The importance of communities.

Not just importing *code*—other things around it too

The importance of the *craft*.

It's OK to care about this stuff

Principles

 The importance of milestones.

 The importance of the recipe.

 The importance of autonomy.

 The importance of ownership.

 The importance of consistency.

 The importance of patience.

 The importance of communities.

 The importance of the *craft*.

Explicitness

*“We’re doing it this way because it’s **how we’ve always done it.**”*

Team

*“Do we have an **implicit** engineering culture?”*

*“Are there things we do the same way **most of the time**?”*

*“Do we have a **reason** for how we do things?”*

Evolution

*“Are we still **aligned** with our values and principles?”*

*“Are we **saying** we do something a certain way... but end up
ignoring it most of the time?”*

Engineering culture.

*“**Explicit** & known”*

*“Built as a **team**”*

*“Evolving by reflecting on **how** and **why**”*

Thank you!
